PROFESSIONAL SUMMARY

A self-taught developer who launched into freelancing in 2017, I have methodically expanded my engineering impact: from deploying localized automation to managing 40 microservices and architecting massive migrations handling **800+ TPS**. Currently serving as **Associate Technical Lead at Delivery Solutions, directing 5 engineers**, I focus on total outcomes, measurable optimization, and technical mentorship. I am now seeking opportunities to guide larger organizations through complex, high-scale engineering challenges.

PROFESSIONAL EXPERIENCE

Chapter 4 · Technical Leadership & Team Growth

Mumbai, INDIA,

Delivery Solutions

Mar 2022 – Present

Associate Technical Lead (Remote)

Synthesizing previous scale expertise to architect foundational shifts and mentor a high-performing engineering cohort.

- **Engineering Leadership:** Managing 5 developers and 4 major initiatives (100+ tasks), aligning technical roadmaps with core business objectives and stakeholder needs.
- **Microservices Transformation:** Orchestrated a monolith-to-microservices migration using DDD, achieving a **73% performance increase** and **34% cost efficiency** through custom load-balancing.
- **Logistics Automation:** Developed Node-RED workflows for Fortune 500 partners (UPS, McKesson), utilizing event-driven webhooks and OAuth for reverse logistics.
- **Security & SaaS Governance:** Built requested-scoped context and multi-tenant JWT guards to secure platform-wide data and authentication.
- **Operational Excellence:** Executed **14 zero-downtime releases** and maintained 85% test coverage while resolving high-priority critical defects.
- **Technical Evangelism:** Authored internal frameworks and comprehensive documentation adopted by over six microservices to standardize development patterns.

Chapter 3 · Scaling & Reliability Mastery

Santa Clara, CA

Irislogic

Aug 2020 – Mar 2022

Programmer Analyst (Remote)

Transitioning from individual contributor to force multiplier by optimizing system-wide performance and developer velocity.

- **Distributed Systems:** Maintained **40+ microservices** at 100 QPS, mastering the architectural patterns required for high-throughput environments.
- **Optimization & Support:** Accelerated validation times from 10 to **2 minutes** and slashed support tickets by **70%** through improved error handling.
- **Infrastructure as Code:** Built cross-team AWS services (SQS, SNS) using NestJS, serving as a reusable backend foundation.
- **Platform Security:** Devised MFA user-management systems and CI/CD pipelines, utilizing Kubernetes and Node.js clustering for reliability.
- **Strategic Communication:** Bridged business needs and development efforts, reducing overall delivery cycles by five business days.

Chapter 2 · Product & SaaS Development

Mumbai, INDIA

Pirates Alert

Jan 2018 – Aug 2020

Software Engineer (Remote)

Establishing core product value by engineering critical systems adopted by multiple enterprise organizations.

- **Anti-Piracy Application:** Architected a detection and reporting system **utilized by 4 companies**, ensuring stable production operation.
- **Full-Stack Versatility:** Deployed solutions across Node.js, Python, and GCP, integrating ML via Google Vision for content recognition.

Cultivating a mindset of full technical ownership by building bespoke solutions for diverse client needs.

- **Custom Automation:** Developed animated models, websites, and chatbots using HTML Canvas and Google recognition technology.
- **Bot Development:** Reduced operational costs via AWS Polly and engineered voice/messaging bots using Twilio and WhatsApp APIs.

SKILLS

- **Core:** Node.js, TypeScript, NestJS, Angular, React, TypeORM, MongoDB, MySQL, RxJS, PrimeNG
- **Infrastructure:** AWS (SQS, SNS, SES, ECS, Polly), Docker, Kubernetes, Jenkins, CI/CD, Redis, gRPC
- **Practices:** Domain-Driven Design, SOLID & Design Patterns, TDD, multi-tenant architecture, OAuth/JWT security
- **Leadership:** Team of 5 — mentoring, epic planning, stakeholder alignment, code review culture, technical documentation

EDUCATION

UNIVERSITY OF MUMBAI

Mumbai, Maharashtra

Bachelor of Science in Information Technology (Jul 2017)

OPEN-SOURCE CONTRIBUTIONS

- Open Source Contribution- Made first contribution to **NestJS**
- **readline-promise** - node.js package

COMMUNITY IMPACT & CONTINUOUS LEARNING

- **Technical Evangelism:** Published high-impact technical literature on NestJS reaching **7,000+ engineers**, bridging the gap between practical mentorship and community education.
- **Open Source Contributions:** Actively improving foundational frameworks through code contributions to **NestJS** and maintenance of the **readline-promise** package.
- **Language Engineering:** Designed the Athena Programming Language (github.com/BhargavMantha/athena-programming-language) to master ASTs and grammar, reflecting a deep commitment to CS theory.
- **Exploratory Development:** Developed a Web3 portal for Ethereum and **Thanos Snap**, a complex visual engine built using [Three.js](https://three.js).
